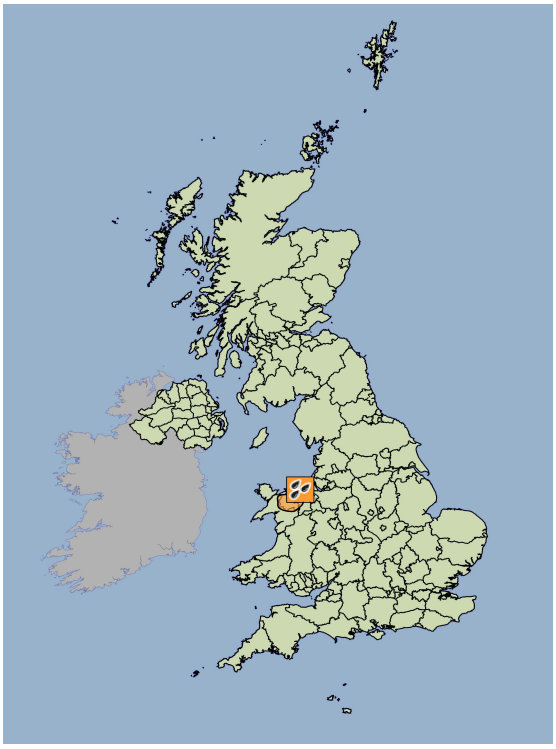
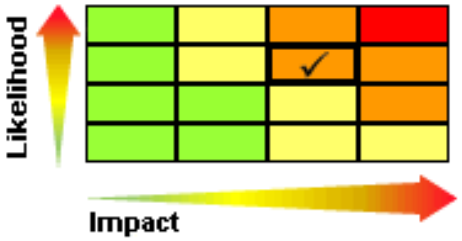
National Severe Weather Warning Service





Chief Forecasters Assessment
A strong, moist westerly to southwesterly flow is expected to develop during Saturday and last through most of Sunday before clearing during the evening. This flow is expected to bring a period of heavy and persistent rain, with 50-100 mm of rain falling in many areas. However, around 200 mm may fall across some of the highest ground. This rainfall, falling on to already saturated ground, is likely to lead to further flooding.

There is some uncertainty in the exact locations of the heaviest rainfall, as well as peak amounts; this will depend on how far north the frontal system moves and how long it remains aligned across any one area. For this reason, the warning will be kept under review over the weekend.

The Met Office have issued an **Amber Warning** of **Rain**

Valid from **17:00 on Sat, 14th Nov 2015** until **21:00 on Sun, 15th Nov 2015**

A frontal system is expected to become slow moving across parts of north Wales during Saturday and Sunday. Rain associated with this feature is expected to become heavy and persistent, especially over hills exposed to the strong westerly to southwesterly flow.

Be prepared for flooding to occur, especially within the Amber warning area, either surface water flooding or flooding from rivers which have remained high after recent heavy rainfall.
